DATA CLASSIFICATION WITHIN DROPBOX

Personal information labeling

We'll scan content in team folders and label the files that contain personal information (also called personal data or PII). After the first scan, you'll get alerts when files with personal information in your team folders are shared outside the team. You can also create reports of all labeled files.

Member and team content ⌄

Create a report of labeled files

The CSV report lists the files with labels, the info types found, and sharing status of each file. The report also contains a link to send us feedback on the information we find. We'll save the report in your Dropbox Business Reports folder.

Create report

Info types

We'll label a file if it contains any of the info types below.

International

- ☑ Credit card number
